Import your back catalog

How to use the Spotify Importer Tool

You will find now under Launch – Overview a new button
Import from Spotify:

- **After clicking the button, you'll need to enter your label name.**
 - **Make sure the label name is exactly as it appears on Spotify, including capitalisation.**
 - **Note: You can only import your own labels; releases released under DistroKid's label, for example, cannot be imported.**
- **Once you've entered your label name, simply click "Import." Most of the metadata will be automatically retrieved from Spotify.**
 - **You'll just need to review the metadata and upload any missing elements, such as artwork or audio files.**

Important:

- **If you are importing multiple releases, make sure to upload all of them to the final step before submitting.**
- **All releases must be submitted simultaneously on the same day.**

After delivery, you will need to ask your previous distributor to remove the products from sale, as this process will not happen automatically.
